

Company Overview

SnapLogic is the leader in self-service application and data integration. We make it fast and easy for users to connect data and applications across the enterprise so they can automate business processes, accelerate decision-making, and drive better business outcomes. Hundreds of Global 2000 customer rely on SnapLogic to reduce the time and cost of their cloud, analytics and digital initiatives.

Founded	2006
Employees	225+
Customers	700+
Founder & CEO	Gaurav Dhillon
Investors	Andreessen Horowitz, Capital One, Ignition Partners, Microsoft, Triangle Peak Partners, and Vitruvian Partners (\$136.3M raised to date)
Headquarters	San Mateo, CA
Regional Offices	London, Hyderabad, Melbourne, Sydney, New York, Boulder
Web Site	www.snaplogic.com
Social Channels	Blog , Twitter , Facebook , LinkedIn

Product Overview

SnapLogic's [Enterprise Integration Cloud](#) accelerates data and process flow across applications, databases, data warehouses, big data streams, and IoT deployments - whether on premises or in the cloud. Unlike legacy integration software that requires painstaking, hand-crafted coding by teams of developers, SnapLogic's simple but powerful platform enables both IT and line-of-business users to create data pipelines that get the right data to the right people at the right time.

Technology Innovation and Differentiation

SnapLogic was founded with the mission to make integration fast and easy with no coding. Our self-service platform helps customers quickly and easily integrate using a visual, snap-and-assemble interface. Under the hood, our cloud-native, metadata-powered architecture enables real-time data processing and high throughput so businesses can run at cloud speed. We recently introduced [Iris](#), the industry's first artificial intelligence technology for enterprise integration, which will fuel a series of innovations over the next 2-3 years to drive the future of autonomous integration.

Key product differentiators include:

- UNIFIED PLATFORM:** Enables integration of multiple applications and data sources - including SaaS, ERP, APIs, data warehouses, big data, and “things” - all on a single platform.
- SELF-SERVICE:** Intuitive software allows for easy snap-and-assemble integrations via a visual, drag-and-drop interface, robust enough for developers yet easy to master for “citizen integrators.”
- MODERN ARCHITECTURE:** Purpose-built for the cloud with 400+ pre-built connectors (Snaps), cloud-based designer and dashboard tools, and high-performance execution nodes (Snaplexes) that power batch, streaming, real-time and event-driven integration.
- ARTIFICIAL INTELLIGENCE:** Learns from millions of metadata elements and billions of data flows to improve the speed and quality of integrations, so both novice and experienced users can do more faster.
