

SnapLogic Enterprise Integration Cloud

A single platform to connect data, apps, APIs, and IoT

The SnapLogic Enterprise Integration Cloud (EIC) accelerates data and process flow across cloud and on-premises applications, as well as data warehouses, big data streams, and IoT deployments. Unlike traditional integration software requiring painstaking, handcrafted coding by teams of developers, SnapLogic makes it fast and easy to create scalable data pipelines that supply

the right data to the right people at the right time. Functionally, SnapLogic's data streaming architecture permits real-time processing with high throughput, powering the rapid movement of data across the enterprise. Lastly, Iris, SnapLogic's AI-powered Integration Assistant, provides expert guidance to swiftly build high quality data pipelines.

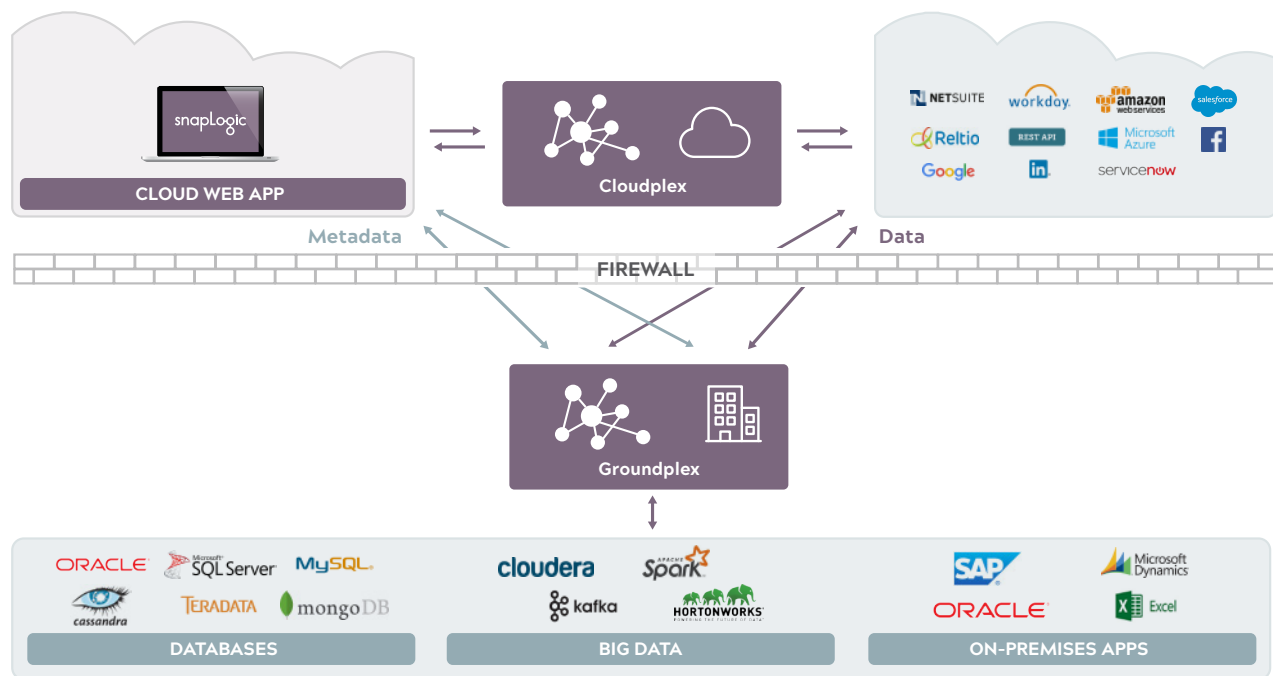

“It’s all point and click... there’s no programming involved. We’ve lowered the bar of entry for virtually anybody to leverage the SnapLogic platform.”

– Alan Leung, Senior Enterprise Systems Program Manager; Box

“We look at SnapLogic as an opportunity to think differently about Integration.”

– Jim Teal, Information Architect; iRobot

Enterprise Integration Cloud Architecture

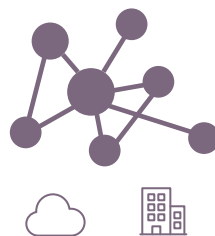

The SnapLogic Enterprise Integration Cloud is purpose-built for next-generation application, IoT, and data integration requirements. The Enterprise Integration Cloud manages orchestrations, schedules, connections, and security details through the Designer, Manager, and Monitoring Dashboard.

Streaming data between applications and data sources is Snaplex, a self-upgrading execution network that scales elastically based on data processing volumes.

Platform: Self-Service UX

Featuring cloud-based Designer to build integration pipelines; Manager to administer users and track technology resources; and Dashboard to monitor overall health and performance.

Execution Grid: Snaplex

Provides elastic scalability; respects data gravity; supports data security; and facilitates real-time streaming speeds.

Pre-Built Connectors: Snaps

400+ Snaps connect most commonly used big data, analytics, ERPs, SaaS, APIs, and IoT, plus an SDK to build your own custom Snaps.

Learn more about how SnapLogic can deliver fast time-to-value and help future-proof your integration platform for growth and scale.
